## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-29, are drawn to a connection establishment and access regulation between an enterprise network and another network, classified in class 709, subclass 229.
  - II. Claims 30-57, are drawn to a method and an apparatus, for traffic/packet analysis and attack prevention, classified in class 726, subclass 13.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions in Groups I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, Group I invention has separate utility such as connection establishment and access regulation between an enterprise network and other networks. Group II invention has separate utility such as traffic/packet analysis for attack prevention. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2135

Applicant is advised that the reply to this requirement to be completed must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
